

WMH1

2" Inline mineralizing cartridge

MINERAL ENRICHMENT

PH ADJUSTMENT

IMPROVES HEALTH

ALKALIZATION

Description:

WMH1 - Linear economical mineralizing cartridge, used after the osmotic filtration process. Consumption of water given osmotic and re-mineralized filtration satisfies the daily needs of the human body for minerals which are available for human consumption.

Osmotic filtration removes all impurities from the water with minerals. **WMH1** restores lost minerals by flowing through the mineralizing bed, the water is enriched with elements necessary for the human body, such as calcium, magnesium, potassium, and sodium. Satisfies the body's daily requirement for minerals that are absorbed by humans from fluids.

Calcium - is an essential component of bones and teeth. It has a positive effect on metabolism and is necessary for maintaining normal heart function and normal activity of the musculoskeletal system.

Magnesium - is involved in over 300 biochemical processes and therefore decides about the proper functioning of the immune and neuromuscular systems. Prevents cancer, atherosclerosis, heart attacks and kidney stones.

Sodium - is a mineral regulating hydration of the body and maintaining an appropriate acid-base balance of the body, it is an excellent blood moderator.

The deposits used for mineralization guarantee obtaining water of optimal quality for the human body, both in quantity and in the proportions of minerals. Consumption of a liter of RO + mineralized water The **WMH1** mineralizer satisfies the daily human body's demand for mineral substances absorbable by humans from liquids and is a perfect complement to the daily diet by subjecting water after filtration of reverse osmosis to re-mineralization by **WMH1** is comparable to the mineral content in mineral waters. Insert offered with 1/4 "NPT connection size.

Application:

- for RO systems
- others

Important:

- Warning: rinse the cartridge until the water color disappears before use.
 - Do not use with microbiologically contaminated water or water of unknown origin.
 - Cartridges help reduce the content of impurities in the water. Replace the cartridge every 3 to 6 months (depending on water quality and degree of pollution).
 - In order to ensure the correct operation of the filter / cartridge, we suggest that you make the necessary replacement of cartridges according to the information provided by the manufacturer.
- H2O guarantees that the product is free from material and manufacturing defects. The warranty does not cover mechanical damages resulting from improper use, misuse of the object, lack of proper maintenance or replacement of the product according to its instructions.

All photos, trademarks, logos and all other intellectual property rights are the sole property of GSP and may not be used without written permission.

Technical Data:

- Media:** mineralizing materials
- Durability*:** 3 - 6 months
- Pressure: max.:** 6 bar
- Temp. operation:** 2°C -40°C
- Cap, Housing:** PP
- Flow:** 3.5 l/min

Features:

- HIGH QUALITY
- COMPETITIVE PRICE
- HIGH QUALITY MINERALIZING MATERIALS
- COMPATIBLE WITH MOST RO SYSTEMS AVAILBLE ON MARKET
